Removal and Installation of the Primary Air Cleaner Element

NOTE:

If a message appears on the CommandCenter™ indicating that the engine air cleaner is restricted, the primary filter element must be changed that very same day.

After the first message appears, the tractor can still be operated long enough to complete the day's work. However, from the next message onwards, tractor operation is restricted for safety reasons. A filter change is then unavoidable.

The secondary filter must be changed no later than at every fourth change of the primary filter, or every 4500 hours or 5 years. See Service / Every 4500 Hours.

LX266893-UN: Primary Filter Element

LX266894-UN: Primary Filter Element

Open flap (A) and remove primary filter (B).

Install a new primary element and close the flap.

IMPORTANT:

Never run the engine without the primary air cleaner element!

IMPORTANT:

Every time the engine primary air cleaner is changed, the cab air filters must be changed also.
