Electrical Schematic - Diesels (3 of 4)

Engine Removal and Installation

Engine Removal:

1. Park machine safely. See "Parking Safely" in the Safety section.
2. Allow engine to cool.
3. Disconnect headlight connector and remove hood.
4. Remove radiator pressure cap and drain coolant into a clean container.
5. Disconnect and remove upper and lower radiator hoses.
6. Disconnect air filter restriction indicator wiring lead and remove air cleaner.

7. Disconnect and remove battery (A).
8. Remove cap screw (B) that fasten hood brackets to battery shield, and nut (C) holding hood brackets to machine frame and remove hood brackets.
9. Remove cap screw (D) holding battery shield to machine frame and remove battery shield.
10. Remove muffler. [See Muffler Removal and Installation](#).

11. **Left side view**

- Disconnect and plug the fuel return line (E) and the fuel supply line (F).
12. Loosen the throttle cable retaining clamp (G) and disconnect throttle cable.
13. Disconnect the engine ground strap (H) and the main wiring harness ground wire bundle (I) by removing the left front engine mount bolt (J), washer and nut.
14. Disconnect the electrical connections (K) on the left side of the engine to the fuel shutoff solenoid, glow plugs, oil pressure switch, and coolant temperature safety switch.
